1. Introduction

1.1 Purpose

This SRS defines the requirements for a desktop-based finance management and accounting system for SESWA.

The system will replace or improve the existing Excel-based financial workflow and provide one authorized finance user with a centralized system for managing financial records, members, sectors, projects, and reports.

1.2 Objectives

The system aims to:

- Reduce manual Excel-based work.
- Maintain organized financial records.
- Record cash and bank transactions.
- Manage accounts and projects.
- Manage SESWA members and elected sectors.
- Track one-year member election terms.
- Support basic accounting operations.
- Manage staff loans and EOBI records.
- Generate financial reports.
- Import existing Excel data.
- Maintain data security and audit history.
- Provide reliable backup and recovery.

1.3 Scope

In Scope

- User login and security
- Dashboard
- Member management
- Sector management
- One-year member election/term management
- Account management
- Project management
- Cash receipts
- Cash payments
- Bank transactions
- Project income and expenses
- Journal entries

- Trial balance
 - Staff loans
 - EOBI
 - Search and filtering
 - Financial reports
 - Excel import/export
 - PDF reports
 - Transaction control
 - Audit/activity log
 - Backup and recovery
-

2. Overall Description

2.1 System Overview

The SESWA Finance Management & Accounting System will be a desktop-based application used by **authorized finance user**.

The user will manage SESWA's financial and related organizational records through a centralized system instead of maintaining multiple Excel files.

The system will also maintain information about **members and the sectors/positions to which they are elected for a one-year term**.

2.2 Main Functions

The system will allow the user to:

1. Log in securely.
2. Manage members.
3. Create and manage sectors.
4. Assign/elect members to sectors.
5. Track one-year election terms.
6. Manage accounts and projects.

7. Record cash receipts and payments.
8. Record bank transactions.
9. Record project income and expenses.
10. Create journal entries.
11. View trial balance.
12. Manage staff loans.
13. Maintain EOBI records.
14. Search and filter records.
15. Generate financial and organizational reports.
16. Import existing Excel records.
17. Modify transactions according to system rules.
18. View activity/audit history.
19. Backup and restore data.

2.3 Primary User

Finance User

The authorized user will have access to all normal system functions, including:

- Members and sector management
- Financial data entry
- Account and project management
- Transaction management
- Accounting
- Reports
- Excel import/export
- Staff loans
- EOBI
- Backup and system records

Technical administration may be performed separately when required.

3. Functional Requirements

FR-001 — Login & Security

The system shall provide secure login for the authorized user.

The system shall:

- Require valid credentials.
- Prevent unauthorized access.
- Allow logout.
- Protect sensitive information.

FR-002 — Dashboard

The system shall provide a dashboard showing important information such as:

- Cash balance
- Bank balance
- Recent transactions
- Project activity
- Member/sector information
- Outstanding staff loans
- Important financial summaries

FR-003 — Member Management

The system shall allow the user to:

- Add a new member.
- Edit member information.
- View member information.
- Search members.
- Activate/deactivate a member where required.

- Maintain relevant member details.
- View a member's current and previous sector assignments/elections.

FR-004 — Sector Management

The system shall allow the user to create and manage organizational sectors/positions.

The user shall be able to:

- Create a sector.
- Define the sector name/title.
- Edit sector information.
- View available sectors.
- Activate/deactivate a sector where required.
- Assign an eligible member to a sector.

FR-005 — Member Election & One-Year Term

The system shall support the election/assignment of members to sectors for a **one-year term**.

The system shall allow the user to record:

- Member
- Sector/position
- Election/appointment date
- Term start date
- Term end date
- Status
- Relevant notes/reference

The system shall:

- Clearly identify the member currently holding a sector.
- Maintain previous election/term history.
- Prevent overlapping active assignments to the same sector where SESWA rules do not allow it.

- Identify expired terms.
- Allow a new member to be assigned when a term ends.
- Preserve historical election records.

FR-006 — Account Management

The user shall be able to:

- Create accounts.
- Edit accounts.
- View accounts.
- Activate/deactivate accounts.
- Assign account codes/categories.

FR-007 — Project Management

The user shall be able to:

- Create projects.
- Edit projects.
- View project information.
- Project under supervision of which sector
- Record project-related income and expenses.
- Search project transactions.

FR-008 — Cash Transactions

The system shall support:

Cash Receipts

The user can record:

- Transaction date
- Receipt/reference number
- Account
- Description

- Amount
- Project, where applicable
- Supporting information

Cash Payments

The user can record:

- Transaction date
- Payment/reference number
- Account
- Description
- Amount
- Project, where applicable
- Supporting information

FR-009 — Bank Transactions

The system shall allow the user to record:

- Bank receipts
- Bank payments
- Transfers
- Bank references
- Dates
- Amounts
- Descriptions
- Related accounts/projects

FR-010 — Accounting

The system shall support:

- Journal entries
- Debit and credit records

- Account balances
- Trial balance
- Opening balances
- Accounting period records

Journal entries shall be validated before posting.

FR-011 — Staff Loans

The system shall allow the user to:

- Record staff loans.
- Record loan amounts.
- Record repayments.
- View outstanding balances.
- Generate loan-related reports.

FR-012 — EOBI

The system shall allow the user to maintain relevant EOBI records, including:

- Employee information
- Contribution information
- Period
- Amount
- Payment/reference information
- EOBI reports

FR-013 — Search & Filtering

The system shall allow records to be searched and filtered by relevant information such as:

- Date
- Account
- Project
- Member

- Sector
- Transaction type
- Reference number
- Amount
- Description
- Election/term status

FR-014 — Reports

The system shall generate relevant reports, including:

Financial Reports

- Cash receipt report
- Cash payment report
- Bank transaction report
- Account statement
- Project income/expense report
- Staff loan report
- EOBI report
- Trial balance
- Transaction summary
- Financial period reports

Member & Sector Reports

- Member list
- Sector list
- Current sector holders
- Member election/term history
- Expired terms
- Current one-year terms

- Sector-wise member report

Reports should support **PDF and/or Excel export** where applicable.

FR-015 — Excel Import & Export

The system shall allow the user to:

- Import existing Excel financial data.
- Validate imported records.
- Identify invalid or duplicate records.
- Export system data to Excel where required.

The reference workbook **Atta Ullah Cash Book 2026–27(1).xlsx** will be used to understand the existing workflow and reporting requirements.

FR-016 — Transaction Control

The system shall:

- Generate unique transaction IDs.
- Validate required fields.
- Validate transaction amounts.
- Prevent invalid account selections.
- Prevent invalid project selections.
- Prevent unauthorized deletion of posted records.
- Maintain controlled correction/reversal procedures.

FR-017 — Audit & Activity Log

The system shall maintain an activity history showing important actions such as:

- Record creation
- Record modification
- Record deletion where permitted
- Member/sector changes
- Election/term changes

- Import activities
- Financial adjustments

4. Non-Functional Requirements

NFR-001 — Usability

The system shall have a simple and clear interface suitable for daily finance and organizational record management.

NFR-002 — Performance

Normal operations such as opening screens, searching records, and generating standard reports should respond within a reasonable time.

NFR-003 — Security

Financial and member data shall be protected through:

- Secure login
- Controlled access
- Password protection
- Secure local data storage

NFR-004 — Data Integrity

The system shall validate financial, member, sector, and election records before saving them.

NFR-005 — Reliability

The system should maintain records consistently and minimize data loss.

NFR-006 — Backup & Recovery

The system shall support regular backup of financial and organizational data and restoration when required.

NFR-007 — Maintainability

The system should be structured so that future improvements and maintenance can be performed without major redesign.

5. Use Cases

5.1 Primary Actor

Finance User

5.2 Main Use Cases

5.3 Example Use Case — Elect/Assign Member to Sector

Actor: Finance User

Precondition: User is logged in and the member and sector already exist.

Main Flow:

1. User selects Member/Sector Management.
2. User selects a member.
3. User selects a sector.
4. User enters the election/term start date.
5. System calculates or records the one-year term end date.

6. System checks for conflicting active assignments.
7. User saves the election.
8. System records the member as the sector holder.
9. System maintains the election in the member's history.

Alternative Flow:

If the sector already has an active member and SESWA rules do not permit multiple active holders, the system shall display a warning and prevent the conflicting assignment.

6. Business Rules

The system shall follow these basic rules:

1. Every transaction shall have a unique transaction ID.
2. Required information must be completed.
3. Transaction amounts must be valid numeric values.
4. Transactions must use valid accounts.
5. Projects shall be selected where required by SESWA financial policy.
6. Posted transactions shall not be silently deleted.
7. Corrections shall follow a controlled process.
8. Journal entries must balance before posting where double-entry accounting applies.
9. Trial balance shall be generated from valid accounting records.
10. Imported Excel records must be validated before becoming active records.
11. Opening balances shall be entered and controlled appropriately.
12. Financial period closing rules shall be defined by SESWA Finance.
13. Each member-sector election shall have a defined start and end date.
14. The standard election/assignment term shall be one year.
15. The system shall maintain historical member-sector assignments.
16. Expired sector terms shall remain in history and shall not be deleted.

17. A new member may be assigned to a sector after the previous term ends.
18. The system shall prevent overlapping active assignments where SESWA rules do not permit them.

7. Acceptance Criteria

The system will be considered acceptable when the authorized user can successfully:

- Log in and access the system.
- Add and manage members.
- Create and manage sectors.
- Assign/elect a member to a sector for one year.
- View current and previous member-sector terms.
- Identify expired terms.
- Manage accounts and projects.
- Record cash receipts and payments.
- Record bank transactions.
- Create journal entries.
- View trial balance.
- Manage staff loans.
- Manage EOBI records.
- Search financial and member records.
- Generate required financial and member/sector reports.
- Import existing Excel data.
- Export required information.
- Correct transactions according to system rules.
- View activity history.
- Backup and restore system data.

8. Approval & Sign-Off

Approval of this SRS confirms that the requirements described above represent the agreed scope of the SESWA Finance Management & Accounting System.

Role	Name	Signature	Date
Client / SESWA Representative	_____	_____	_____
Finance User	_____	_____	_____
Project Development Team	_____	_____	_____
